# Contractor's Corner

James Spotts (Dr. Dirt)  
Southeast Environmental Consultants

# Audience Contribution

- All too often, the site contractor is faced with erosion and sediment control problems created by “others”. Because it is his/her site, the site contractor must correct them.
- Some problems are noted on many sites. Why are they so common? Do you have a solution?
- In this ‘exercise’, the audience is divided into several teams. Each team will discuss a given a common erosion & sediment control problems found on construction sites. The objective is to provide answers to the following:

Several minutes of team discussion about this problem should include:

- 1) What is the problem;
- 2) What caused the problem;
- 3) Who is responsible to correct it;
- 4) How can it be corrected in terms of effectiveness and cost.

Note: Each aspect can have more than one response.

# Construction Exit/Entrance

# Sediment Barriers

# Slope Stabilization

# Concrete Washout

# Drop Inlet

# Dust Control

# Curb Inlet

# Pipe Discharge

Summary by the Team Leaders

Findings by the Team Leaders

?

Conclusion:

**YES**, a solution to each of these problems does exist!
