

Sandy Creek #15, Jackson County: Brasfield & Gorrie of Atlanta, Georgia has completed construction on this dam, which features a 180 ft. concrete chute spillway with a corrugated weir. The top of the dam was raised by 3 ft. to ensure that all flood waters are directed to the chute spillway. Scroll through the pictures below to see the construction process from start to finish.

November 2010 - Vegetation is cleared around the plunge pool

The crew begins regrading the back slope of the dam and excavating the site of the new spillway.

February 2011 - Spillway construction is ongoing

March 2011 - A view of the concrete spillway from the backside of the dam

April 2011 - Forming the weir walls

May 2011 - A view of the weir walls from the backside of the dam.

Weir wall construction seen from the front side of the dam.

June 2011 - The completed working end of the new auxiliary spillway

September 2011 – View overlooking the completed dam from the side

November 2011 – Rear view of the completed watershed dam
